

# The European Biodiesel Board (EBB) moves focus to anti-dumping case

**Brussels, 24 January 2024: After its success in identifying evidence of fraudulent practices and stopping the suspected re-exporting of Indonesian biodiesel through the Port of Hainan in China, the EBB has moved to the next and most significant phase of its plan to combat the huge volumes of biodiesel imports from China that are causing such damage to the European industry.**

After its success in identifying evidence of fraudulent practices and stopping the suspected re-exporting of Indonesian biodiesel through the Port of Hainan in China, the EBB has moved to the next and most significant phase of its plan to combat the huge volumes of biodiesel imports from China that are causing such damage to the European industry. The EBB's attention on unfair trade can now be fully focused on the investigation into dumping of Chinese biodiesel. The EBB President, Dickon Posnett said: *"Our European businesses have been suffering severely from unfairly priced Chinese product and EBB is determined to defend the biodiesel industry's interests and create a fair trading environment. The anti-circumvention case has done what we hoped it would. The fact that the action immediately stopped around 470,000t of suspect shipments from Hainan is revealing, but now we plan to put all our energy into prosecuting the AD case to get measures in place as soon as possible."*

The European Commission is continuing the anti-circumvention investigation and will be assessing the latest developments and the public interest. Meanwhile the registration of imports remains in place. For EBB, the anti-circumvention investigation has uncovered information regarding fraudulent activities that will be passed to the appropriate anti-fraud investigation authorities. EBB is working closely with those services of the EC which will now take those investigations forward as part of EBB's continued efforts on anti-fraud, including proposed combined action with EC, the Voluntary Schemes and Certification Bodies.

*The European Biodiesel Board (EBB) is a non-profit organisation established in January 1997. The EBB gathers over 37 members across 21 Member-States, representing over 65% of the European output. Biodiesel is the main European solution to reduce emissions from transport and dependence on imported oil. The EBB promotes the use of biodiesel in the European Union and is committed to fulfil International standards for sustainability in GHG emissions and sustainable feedstock. The EBB is constantly working towards the development of improved and greener technologies.*
